LESSON 1

CSS

Formatting Text with CSS

Typography

Refers to the styling and arrangement of text on a web page using Cascading Style Sheets. It encompasses all the properties and techniques used to control how text appears to the user, ensuring legibility, readability, and visual appeal.

Key aspects of typography in CSS

Font Properties:

- font-family: Specifies the typeface (example: Arial, "Times New Roman")
  - When using **multiple** values, the font-family list of **font families** defines the **priority** in which the browser should choose the font family.
  - The browser will look for each family on the user's **computer** and in any **@font-face** resource.

- The list is prioritized from **left** to **right**: it will use the first value if it's available, or go to the next one, until the end of the list is reached.
  The **default** font family is defined by the browser preferences.

<u>Syntax:</u> font-family:”Source Sans Pro”,”Arial”, ”Sans-Serif”;

In this example, the browser will try to use Source Sans Pro if it's available. If it can't find it, it will try to use Arial. If it's not available either, it will use the browser's sans-serif font.

<u>Values:</u> Any typeface

Key aspects of typography in CSS

- font-size: Sets the size of the text.

Syntax: font-size:12px, font-size:12pt, font-size:50%, font-size:medium

Values: normal, xx-small, x-small, small, medium, large, x-large, xx-large, any number followed by px (for size in pixels), pt (for size in points) or % (expressed as percent).

Key aspects of typography in CSS

- font-weight: Defines the weight, boldness or thickness of the text or character.

Syntax: font-weight:bold, font-weight:200
Values: normal, bold, bolder, lighter, any number from 100-900 (100 is the thinnest)

Key aspects of typography in CSS

100 Thin
200 Extra Light
300 Light
400 Normal
500 Medium
600 Semi Bold
700 Bold
800 Extra Bold
900 Ultra Bold

Note: If the font family doesn't provide the requested weight, it will use the closest available one.

Key aspects of typography in CSS

- font-style: Controls whether the text is normal, italic, or oblique.

  Syntax: font-style:italic

  Values: italic, oblique, normal

Key aspects of typography in CSS

- font-variant: Defines which glyph to use for each letter. Used to do small-caps or other variations.

Glyph - refers to the specific visual representation of a character or symbol within a font.

Syntax: font-variant:normal, font-variant:small-caps

Values: normal, small-caps

Key aspects of typography in CSS

Text Properties:

- line-height: Adjusts the vertical space between lines of text, indicates the line spacing taken up by each line.

  Syntax: line-height:11px

  Values: normal, any number followed by px (for size in pixels), pt (for size in points) or % (expressed as percent).

Key aspects of typography in CSS

Text Properties:

- letter-spacing: Defines the spacing between the characters of a block of text, controls the horizontal space between individual characters.

Syntax: letter-spacing:2px

Values: normal, any number followed by px (for size in pixels)

Key aspects of typography in CSS

Text Properties:

- text-align: Specifies the horizontal alignment of text (left, right, center, justify). Defines how the text content of the element is horizontally aligned.

Syntax: text-align:justify
Values: left, right, center, justify

Key aspects of typography in CSS

Text Properties:

- text-indent: Indents the first line of a text block.

  Syntax: text-indent:25px

  Values: length, percentage

Key aspects of typography in CSS

Text Properties:

- color: Specifies the text color.
  Syntax: color:violet
  Values: any color names, hexadecimal color codes

- white-space: Defines how the element's white space is handled.
  Syntax: white-space:normal
  Value: normal, nowrap, pre, pre-wrap, pre-line

Key aspects of typography in CSS

Text Properties:

normal - Sequences of spaces are combined into one. Line breaks are ignored. The text content is wrapped.

nowrap - Sequences of spaces are combined into one. Line breaks are ignored. The text content is **not** wrapped and remains on a **single line**.

Key aspects of typography in CSS

Text Properties:

pre - The white space is **exactly preserved**. Sequences of spaces are preserved. Lines break only on new lines and

pre-wrap - The white space is **mostly preserved**. Sequences of spaces are preserved. Lines break on new lines, <br>, but also when reaching the end of the element

Key aspects of typography in CSS

Text Properties:

pre-line - Only **new lines** are preserved. Sequences of spaces are **combined** into one. Lines break on new lines, <br>, but also when reaching the end of the element

Key aspects of typography in CSS

Text Properties:

word-spacing - Defines the spacing between words of a block of text.

Syntax: word-spacing:normal
Values: normal, any number followed by px (for size in pixels)

Key aspects of typography in CSS

Text Properties:

- word-break - Defines how words should break when reaching the end of a line.

Syntax: word-break:normal
Values: normal, break-all

Key aspects of typography in CSS

Text Decoration and Transformation:

- text-decoration: Indicates the decoration applied. Adds lines to text (underline, overline, line-through).

Syntax: text-decoration:underline
Values: none, underline, overline, line-through, blink, sub, super

Key aspects of typography in CSS

- text-transform: Indicates the case of the text, changes the capitalization of text.

Syntax: text-transform:lowercase
Values: none, capitalize, uppercase, lowercase

Key aspects of typography in CSS

- text-shadow - Defines the shadow of the text content.

Syntax: text-shadow:none (text content has no shadow), text-shadow:2px,6px (the first is the *horizontal* offset, the second is the *vertical* offset
Note: The shadow color will be inherited from the text color.

Key aspects of typography in CSS

text-shadow:2px,6px,red (you can define a **color** as the last value.

Note: As with color, you can use color names, hexadecimal

Values: none, any number followed by px (for size in pixels)
